Case Study

Duraclenz Stainless Steel Toilet Tissue Dispensers

Duraclenz Limited, a subsidiary of Exeloo Limited, with its 22 years in the public washroom environment, recognises that domestic sized toilet rolls are not suitable for public washroom as the rolls need to be changed too frequently. We believe that jumbo rolls should be used in all these environments.

Duraclenz has developed a wide range of stainless steel jumbo toilet roll dispensers for installation in public facilities. The Department of Conservation in Dunedin, NZ has recognised the benefits of the Exeloo MD100 which is a surface mounted jumbo roll dispenser. They tried the plastic dispensers and the low cost stainless steel dispensers that are available on the market but found these were easily broken, torn from the wall, bent, buckled or the plastic locks were picked with screwdrivers. With this experience behind them, they were happy to purchase large numbers of the Duraclenz MD100 for installation throughout the Otago district.

These dispensers have worked extremely well with no reported damage or failures during the five year programme of toilet paper dispenser replacement in all of their toilet facilities.

In Australia, surface mounted jumbo roll dispensers are not permitted in their accessible toilet facilities as they would protrude above the grab rail. To overcome this problem, Exeloo have also developed recessed manually operated dispensers in either one roll or two roll versions.

Duraclenz also manufactures electronic dispensers which dispense the paper by activating a touch free button. All of these dispensers are designed to allow the toilet paper to be dispensed in the specific design permitted in their access code.
