

Case Study

Toilet Facilities For Transit Organisations

Exeloo toilet units have been well received in many transit organisations because of their small footprint which minimises the space taken up on platforms and walkways, and because each cubicle is fully self contained and opens straight onto the concourse, providing excellent CPTED (Crime Prevention Through Environmental Design) principle which makes them acceptable to Homeland Security.

USA

An Exeloo Galaxy unit is located in the Huntington Station in the **Washington Area Metropolitan Transit Authority** in Washington DC. This unit has been installed since 2003.

We understand this is the only washroom facility in the WMATA network that is permitted to be open for public use.

MARTA (Metropolitan Area Regional Transit Authority) in Atlanta has had an Exeloo Galaxy fully automated unit installed in the HE Holmes Station in Stonehurst Place, SW Atlanta since 2003 and this unit has performed extremely well for MARTA.

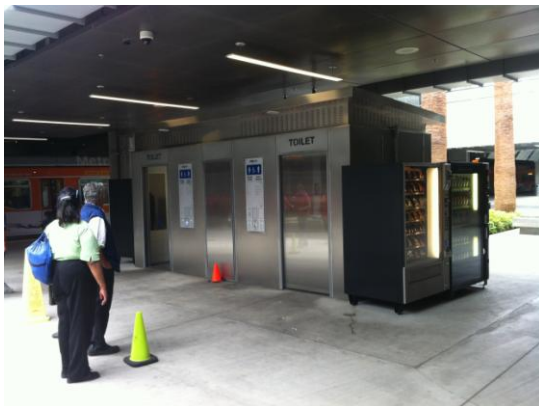

Marietta Transfer Centre, Cobb County in Atlanta have had an Exeloo Orion unit installed at the South Marietta Parkway and another at the Cumberland Transfer Centre.

The **Potomac and Rappahannock Transportation Commission** has had two Exeloo Orion units installed at the PRTC Transfer Centre in Potomac Mills Road since 2007.

LA Metro has recently installed two Exeloo Jupiter twin auto units in the El Monte Busway Transfer Centre and the Artesia Busway Station in LA.

All of these units have provided years of safe, reliable service to thousands of local travellers. Patronage is very high with up to 400 people a day using each of these facilities.

AUSTRALIA AND NEW ZEALAND

In Australia and New Zealand, Exeloo toilet facilities have been recognised as being ideal for bus, train and tram drivers because of their automated electronic locking systems. Exeloo has supplied toilet units to **Yarra Trams** which are provided on the end stop of the tram lines and these are exclusive for driver use using a swipe card access.

NEW ZEALAND

Auckland Transport uses the Exeloo Orbit toilet facilities for this purpose having recently installed a twin unit with one of the cubicles being exclusive for drivers using a keypad at the Onehunga Rail Station.

They have also installed two triple units installed at the North Shore Busway each with one of the cubicles being available for the Busway drivers using a swipe card.

AUSTRALIA

Exeloo Galaxy toilet units have also been installed in 13 rail stations in the South Australian rail system in Adelaide. These facilities are not exclusive to train drivers but are available on the platforms.

In Sydney, NSW, Australia, Exeloo toilet units have also been installed at some of their rail and bus stations.

- Manly Bus Interchange

- Cabramatta Rail Station

- Railway Crescent, Jannali

- Epping Station
- Hurstville Bus Station
